Computer Engineer with experience in backend development, QA, and blockchain — passionate about building reliable software and decentralized infrastructure.

EXPERIENCE

Backend Engineer, Nexus

Sep 2026 – Present

- Backend Engineer, ramping up on the team's systems and codebase.

Backend Engineer, Multicommerce

Jan 2026 – Aug 2026

- Designed and built backend services for a casino management platform using Node.js and PostgreSQL.
- Refactored the server architecture to improve maintainability, decoupling tightly coupled components.
- Optimized the database connection pool, reducing PostgreSQL load from ~100% to 60% under stress and cutting latency by ~500ms.
- Previously served as QA Engineer (Apr 2024 – Dec 2025), executing manual and functional tests, tracking issues and collaborating on resolution.

Intern, BSV Association

Oct 2025 – Dec 2025

- Built proof-of-concept blockchain SDK integrations for micropayments, NFTs, and on-chain storage, contributing to verifiable financial infrastructure.
- Developed developer tools and SDK documentation to improve usability and streamline integration flows.

Full-Stack Developer, Apeiron

Apr 2021 – Jul 2021

- Developed a cross-selling and upselling plugin for Tiendanube using Node.js, including REST API development.
- The project increased client revenue by improving product recommendations and optimizing the shopping experience.

Teaching Assistant, Deep Dive into Blockchain 2026 (7th Ed.), University of Zurich

Jul 6 – Jul 24, 2026

- Supported an intensive 3-week course on blockchain covering technical, economic, and legal perspectives, alongside professors and industry experts.

Teaching Assistant of Databases, Universidad Nacional de Mar del Plata

Aug 2025 – Dec 2025

- Provided academic support and tutoring on database fundamentals (ER modeling, relational algebra, SQL, normalization, ACID transactions, query optimization).

HACKATHONS

1st Place — Ethereum Argentina Hackathon (Adoption, Impact & DAOs)

2026

- Built **FundMe!**, a Lemon-integrated MiniApp for transparent crowdfunding. Funds accrue DeFi yield while active and are released on goal completion. Designed DeFi yield strategies and integrated with Lemon's ecosystem for visibility.

EDUCATION

Universidad Nacional de Mar del Plata, Computer Engineering

2021 – May 2026

- Graduated May 22, 2026
- Final project — IlliApp:** Academic management web system for a secondary school. Led requirements gathering, designed system architecture, and coordinated the development team.

Secondary School — Hungary (2019–2020) & Argentina (2014–2019)

SKILLS

- Languages & Runtimes:** Node.js, Python, Java, JavaScript, TypeScript, SQL
- Frameworks & Tools:** Spring, React, Git, Docker, Postman
- Databases:** PostgreSQL, MongoDB
- Other:** API Design, RESTful APIs
